11.106 Purchase descriptions for service contracts.

In drafting purchase descriptions for service contracts, agency requiring activities shall ensure that inherently governmental functions (see Subpart 7.5) are not assigned to a contractor. These purchase descriptions shall--

- (a) Reserve final determination for Government officials;
- (b) Require proper identification of contractor personnel who attend meetings, answer Government telephones, or work in situations where their actions could be construed as acts of Government officials unless, in the judgment of the agency, no harm can come from failing to identify themselves; and
- (c) Require suitable marking of all documents or reports produced by contractors.

[The page contains extremely faint and illegible text, likely bleed-through from the reverse side of the document. No specific content can be transcribed.]

the fact that the \mathbb{Z}_2 -action is not free, the quotient space is not a manifold. The quotient space is a orbifold, which is a generalization of a manifold. The orbifold structure is important for the study of the moduli space of Riemann surfaces.

The orbifold structure is also important for the study of the moduli space of Riemann surfaces. The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces.

The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces. The orbifold structure is a generalization of a manifold, and it is important for the study of the moduli space of Riemann surfaces.
